- **Random Grid (RG) based VSS**

- O. Kafri, and E. Keren, “Encryption of pictures and shapes by random grids,” *Optics Letters*, vol. 12, no. 6, 1987, pp. 377-379.
- Three encryption algorithms for black and white images:

Generate a random grid:  $share_1$   
For any pixel in secret image  
if (image.pixel = 1)  
     $share_2.pixel = 1 - share_1.pixel$   
else  
     $share_2.pixel = share_1.pixel$

KK1

Generate a random grid:  $share_1$   
For any pixel in secret image  
if (image.pixel = 1)  
     $share_2.pixel = \text{random}(0, 1)$   
else  
     $share_2.pixel = share_1.pixel$

KK2

Generate a random grid:  $share_1$   
For any pixel in secret image  
if (image.pixel = 1)  
     $share_2.pixel = 1 - share_1.pixel$   
else  
     $share_2.pixel = \text{random}(0, 1)$

  - *The FTVSS Scheme*
- **THE PROPOSED SCHEME**
  - *The Main Idea and Algorithm*
  - *The Experimental Results*
- **ANALYSIS AND COMPARISON**
- **CONCLUSIONS**

## Introduction (1/2)

- In 1987, Kafri and Keren proposed the *visual secret sharing schemes* (VSSS for short).
- In 1995, Noar and Shamir proposed *visual cryptography* (VC for short), which is a way to encrypt one secret image and it can be decoded by human vision without any calculation.

	Encryption	$(k, n)$ - threshold	Pixel Expansion
Kafri and Keren	random grid	$(2, 2)$	No
Noar and Shamir	code book	$(k, n)$	Yes

## Introduction (2/2)

- ▶ In practical, a slight misalignment between the shares could dramatically degrade the visual quality of the reconstructed image. If the size of one-pixel which be printed on the transparencies is small, the alignment will be difficult.

<input checked="" type="checkbox"/>	23/100	465/3200

# The Proposed Scheme –

## *The Main Idea and Algorithm*

- ▶ Taking  $n \times n$  grid as a unit, the image is divided into  $n \times n$  units, for  $n = 7$ .
- ▶ Counting the number of black and white pixels in each unit.
  - ▶ the black pixels  $>$  white pixels  $\Rightarrow$  the unit is black
  - ▶ the black pixels  $<$  white pixels  $\Rightarrow$  the unit is white

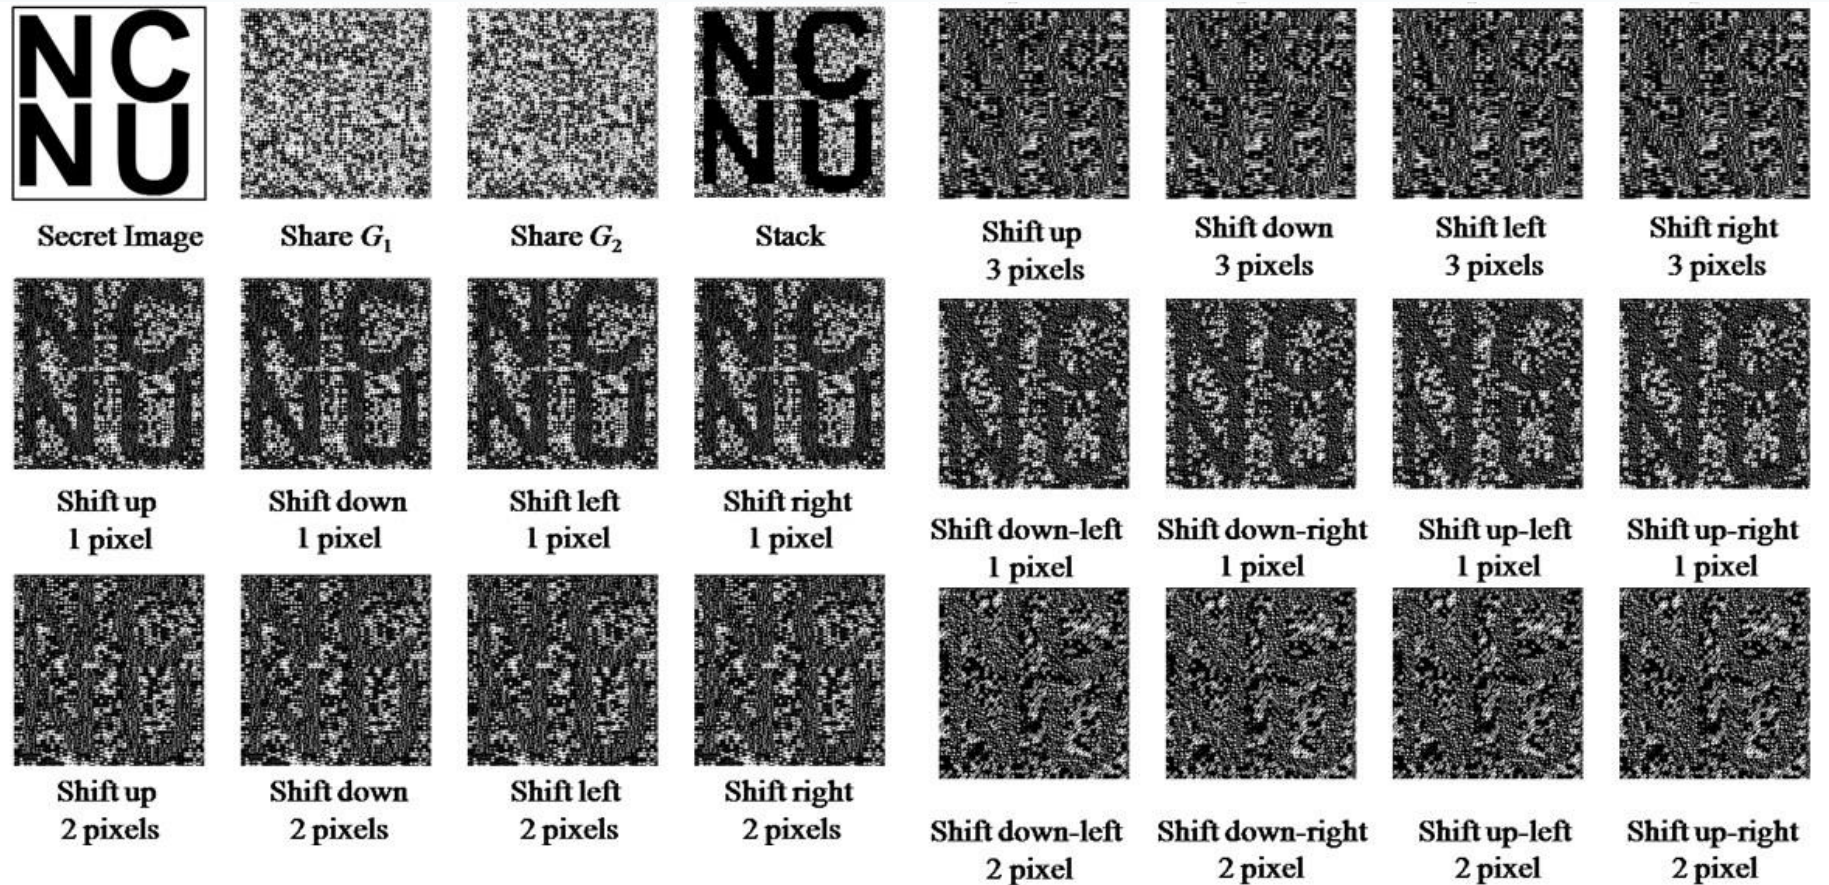

# The Proposed Scheme –

## *The Main Idea and Algorithm (2/2)*

- **First share:** random we designed.
- **Second share:** the Algorithm KK across the same unit, and unit in the secret image.

Image	$G_1$	$G_2$	Stack	Image	$G_1$	$G_2$	Stack

# The Proposed Scheme – The Experimental Results (1/2)

Secret Image    Share  $G_1$     Share  $G_2$     Stack

Shift up 1 pixel    Shift down 1 pixel    Shift left 1 pixel    Shift right 1 pixel

Shift up 2 pixels    Shift down 2 pixels    Shift left 2 pixels    Shift right 2 pixels

Shift up 3 pixels    Shift down 3 pixels    Shift left 3 pixels    Shift right 3 pixels

Shift down-left 1 pixel    Shift down-right 1 pixel    Shift up-left 1 pixel    Shift up-right 1 pixel

# ANALYSIS AND COMPARISON (1/7)

Image	$G_1$	$G_2$	Stack	Image	$G_1$	$G_2$	Stack
□				□			
□				□			

- The Transmittance for a **white** pixel in secret image =
 
$$\begin{aligned}
 & (74 + 60 + 150 + 8) / 784 \\
 & = 292 / 784 \\
 & = 73/196.
 \end{aligned}$$

# ANALYSIS AND COMPARISON (2/7)

Image	$G_1$	$G_2$	Stack	Image	$G_1$	$G_2$	Stack
■				■			
■				■			

- The Transmittance for a **white** pixel in secret image =
 
$$\begin{aligned}
 & (26 + 36 + 26 + 12) / 784 \\
 & = 100 / 784 \\
 & = 25/196.
 \end{aligned}$$

# ANALYSIS AND COMPARISON (3/7)

- The transmittance analysis for stacking two units for  $n = 7$ , compare with for  $n = 5$ , and 6 (FTVSS).

$n = 7$	Stack	Shift 1 pixel	Shift 2 pixels	Shift 3 pixels
□	1/2	73/196	62/196	53/196
■	0	25/196	37/196	45/196
$n = 6$	Stack	Shift 1 pixel	Shift 2 pixels	Shift 3 pixels
□	1/2	50/144	42/144	38/144
■	0	25/144	36/144	33/144
$n = 5$	Stack	Shift 1 pixel	Shift 2 pixels	
□	1/2	31/100	26/100	
■	0	19/100	23/100	

# ANALYSIS AND COMPARISON (4/7)

- The transmittance analysis for stacking two resulting units for one pixel diagonal-shift for  $n = 7$ , compare with for  $n = 4, 5$ , and  $6$  (FTVSS).

Diagonal-shift one pixel	$n = 4$	$n = 5$	$n = 6$	$n = 7$
□	381/2048	721/3200	1189/4608	1893/6272
■	173/2048	465/3200	422/4608	613/6272

- **Theorem 1.** The proposed scheme are the fault-tolerant VSS scheme.

# ANALYSIS AND COMPARISON (5/7)

► Compare CI with MTVSS and FTVSS. (1/2)

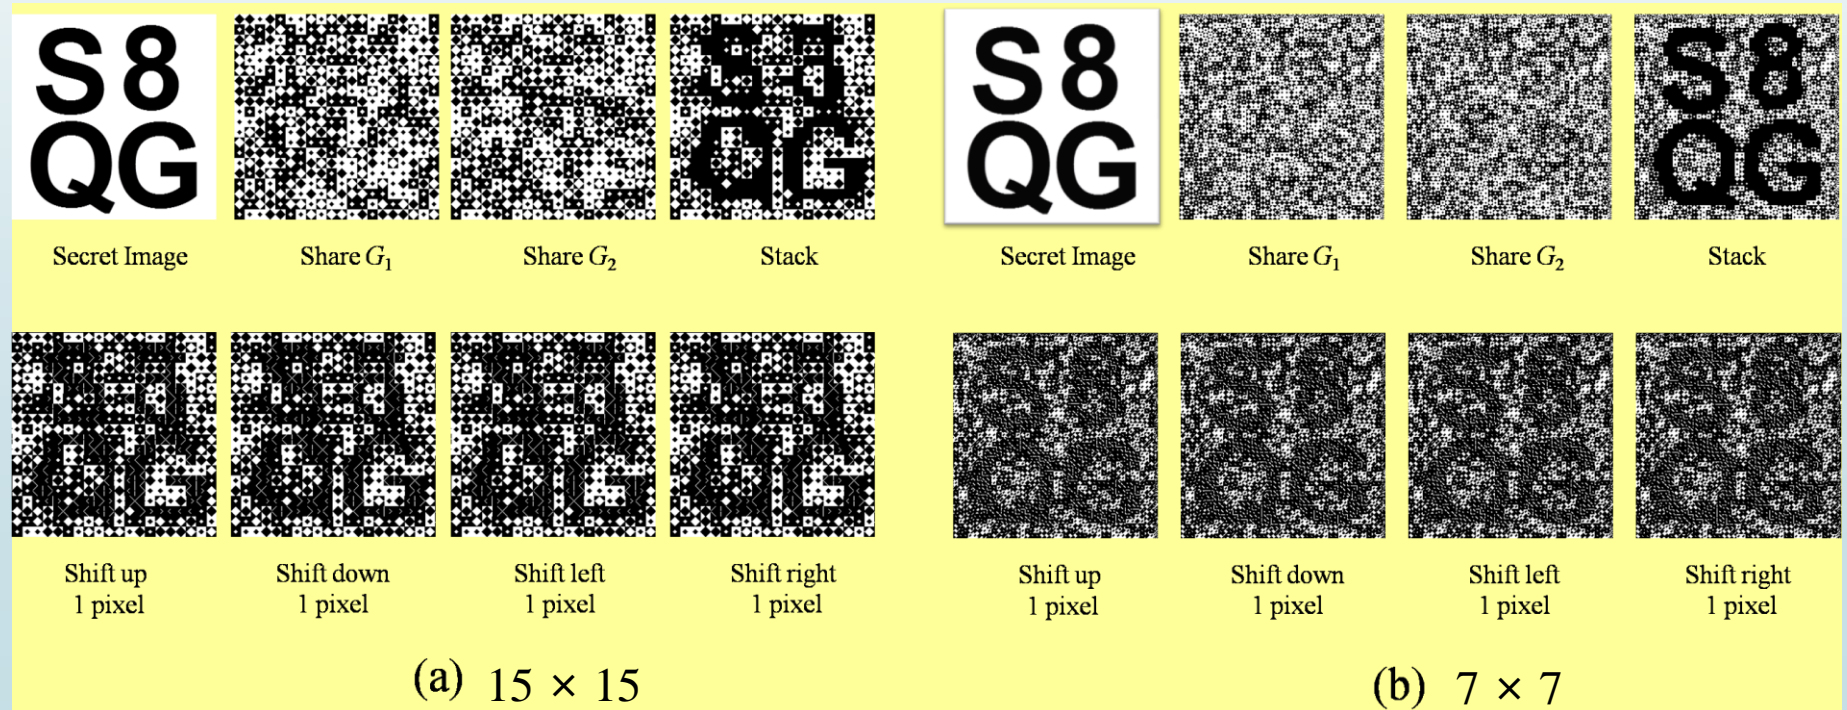

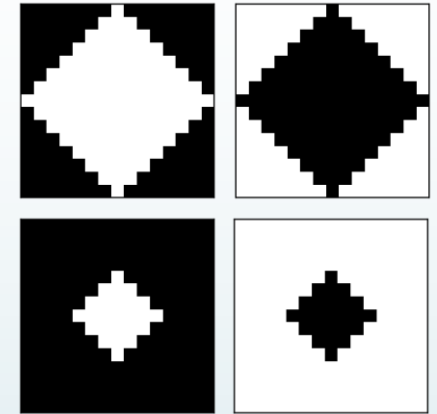

# ANALYSIS AND COMPARISON (6/7)

► Compare CI with MTVSS and FTVSS. (2/2)

# ANALYSIS AND COMPARISON (7/7)

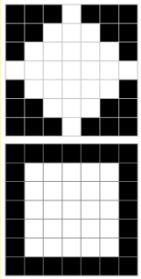

- If  $n$  is greater, will the performance of tolerance be better ?

# CONCLUSIONS

- ▶ This paper presents a visual secret sharing scheme that are fault tolerant without pixel expansion; which is an extended scheme of FTVSS.
- ▶ This paper also discusses the limits of this technique.
- ▶ Future works:
  - ▶ Improving the existing algorithms.
  - ▶ Round sharp?
  - ▶ Design a  $(k, n)$ -threshold VSS scheme that addresses the misalignment problem without pixel expansion.

### **§ 7.3 Meaningful VSS Scheme**

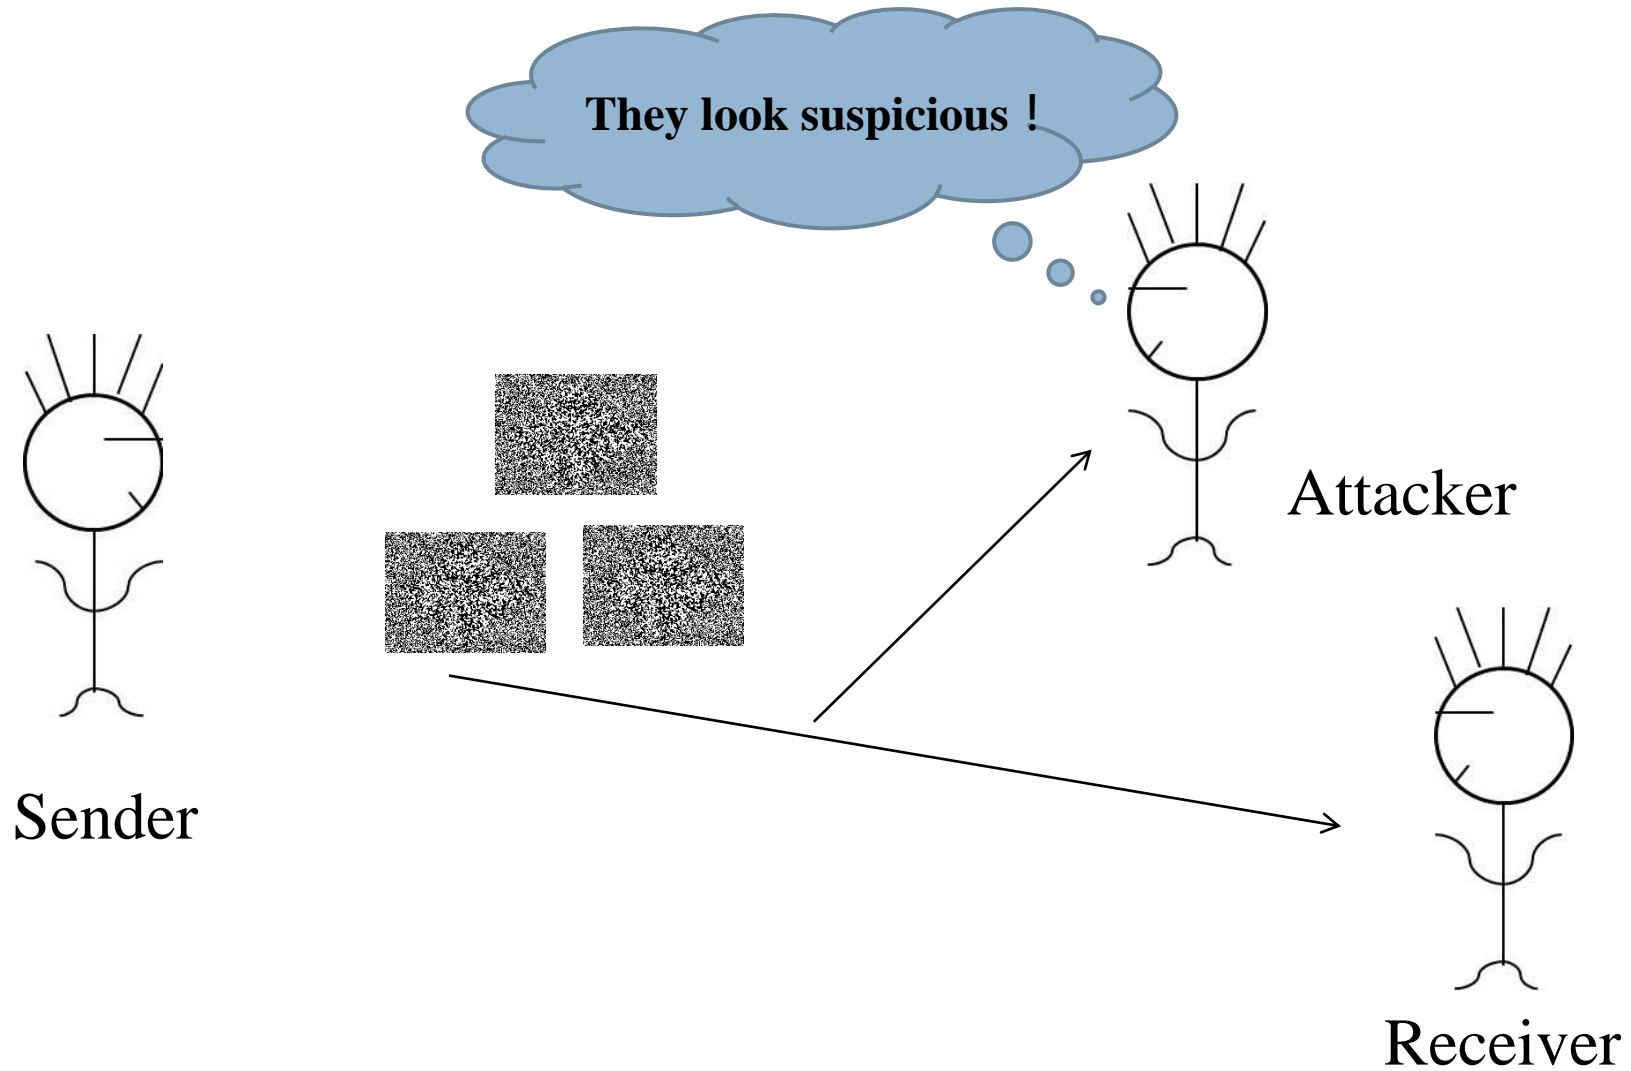

**Slides for a Course Based on**

**Bo-Yuan Huang and Justie Su-Tzu Juan\*, “A Meaningful Visual Multi-Secret Sharing Scheme by Random Grids,” *Proc. of GCEAS 2017*, Okinawa Convention Center, Okinawa, Japan, July 25-27, 2017, pp. 244-255.**

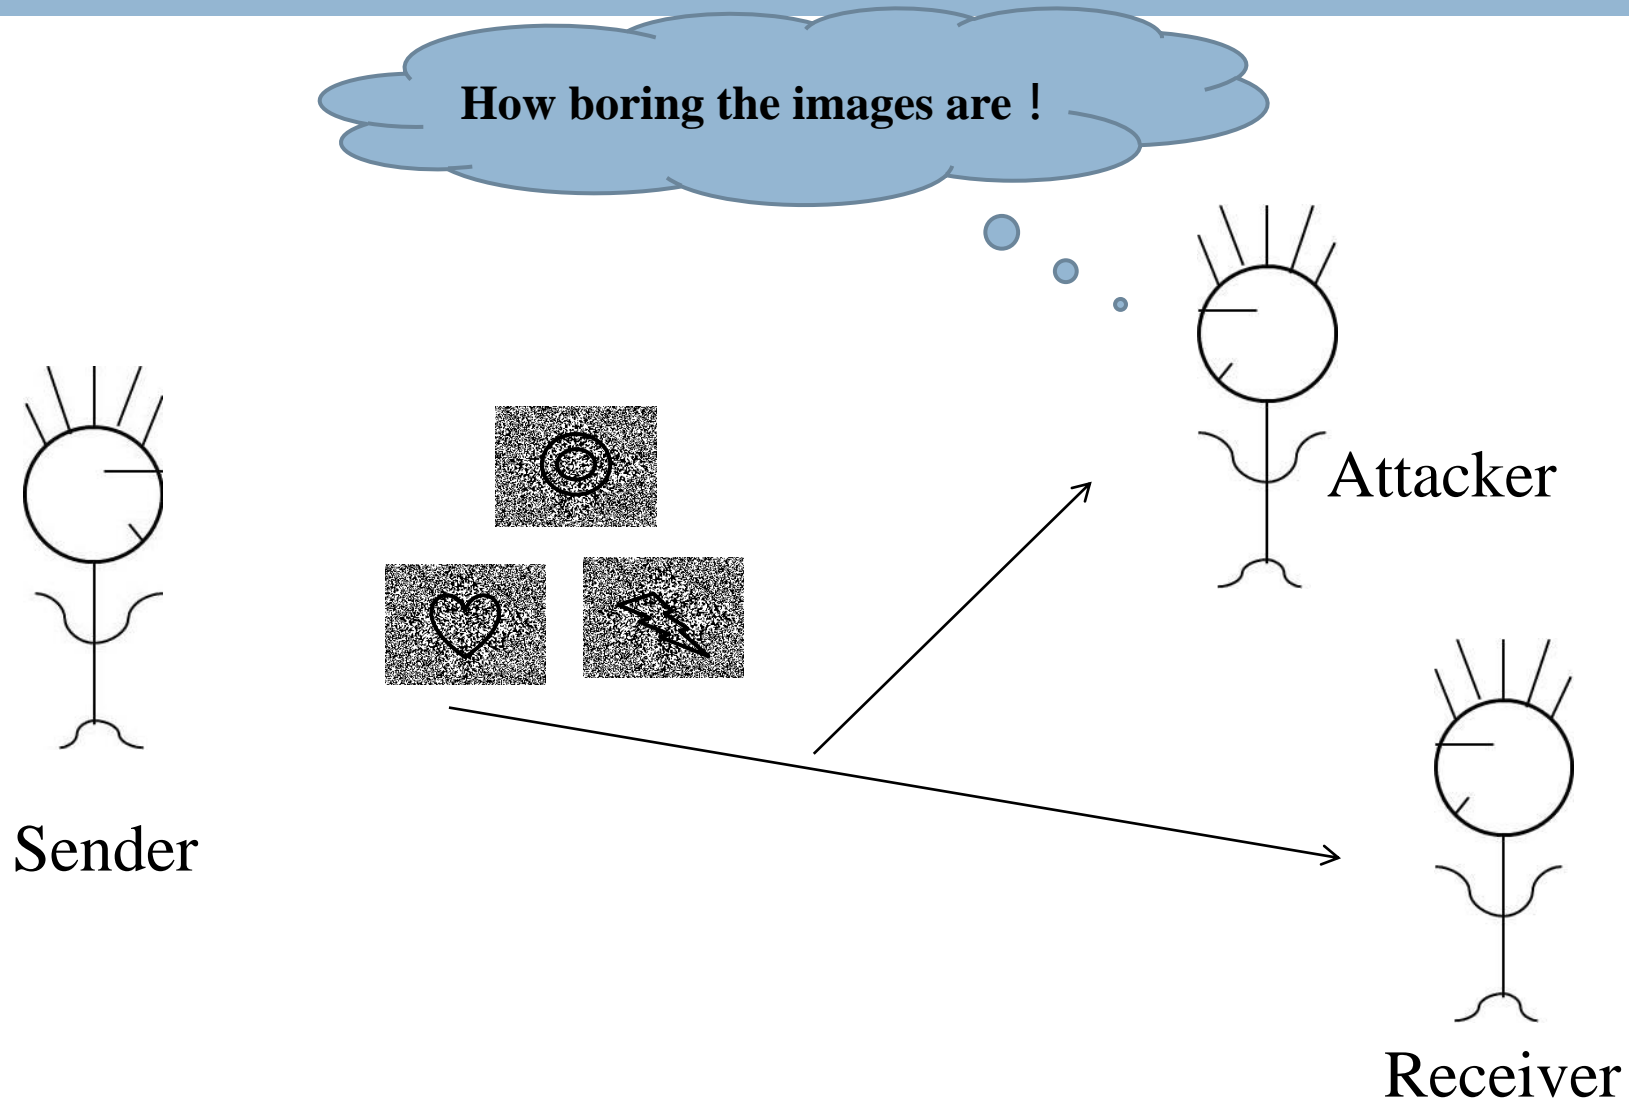

# Image management ?

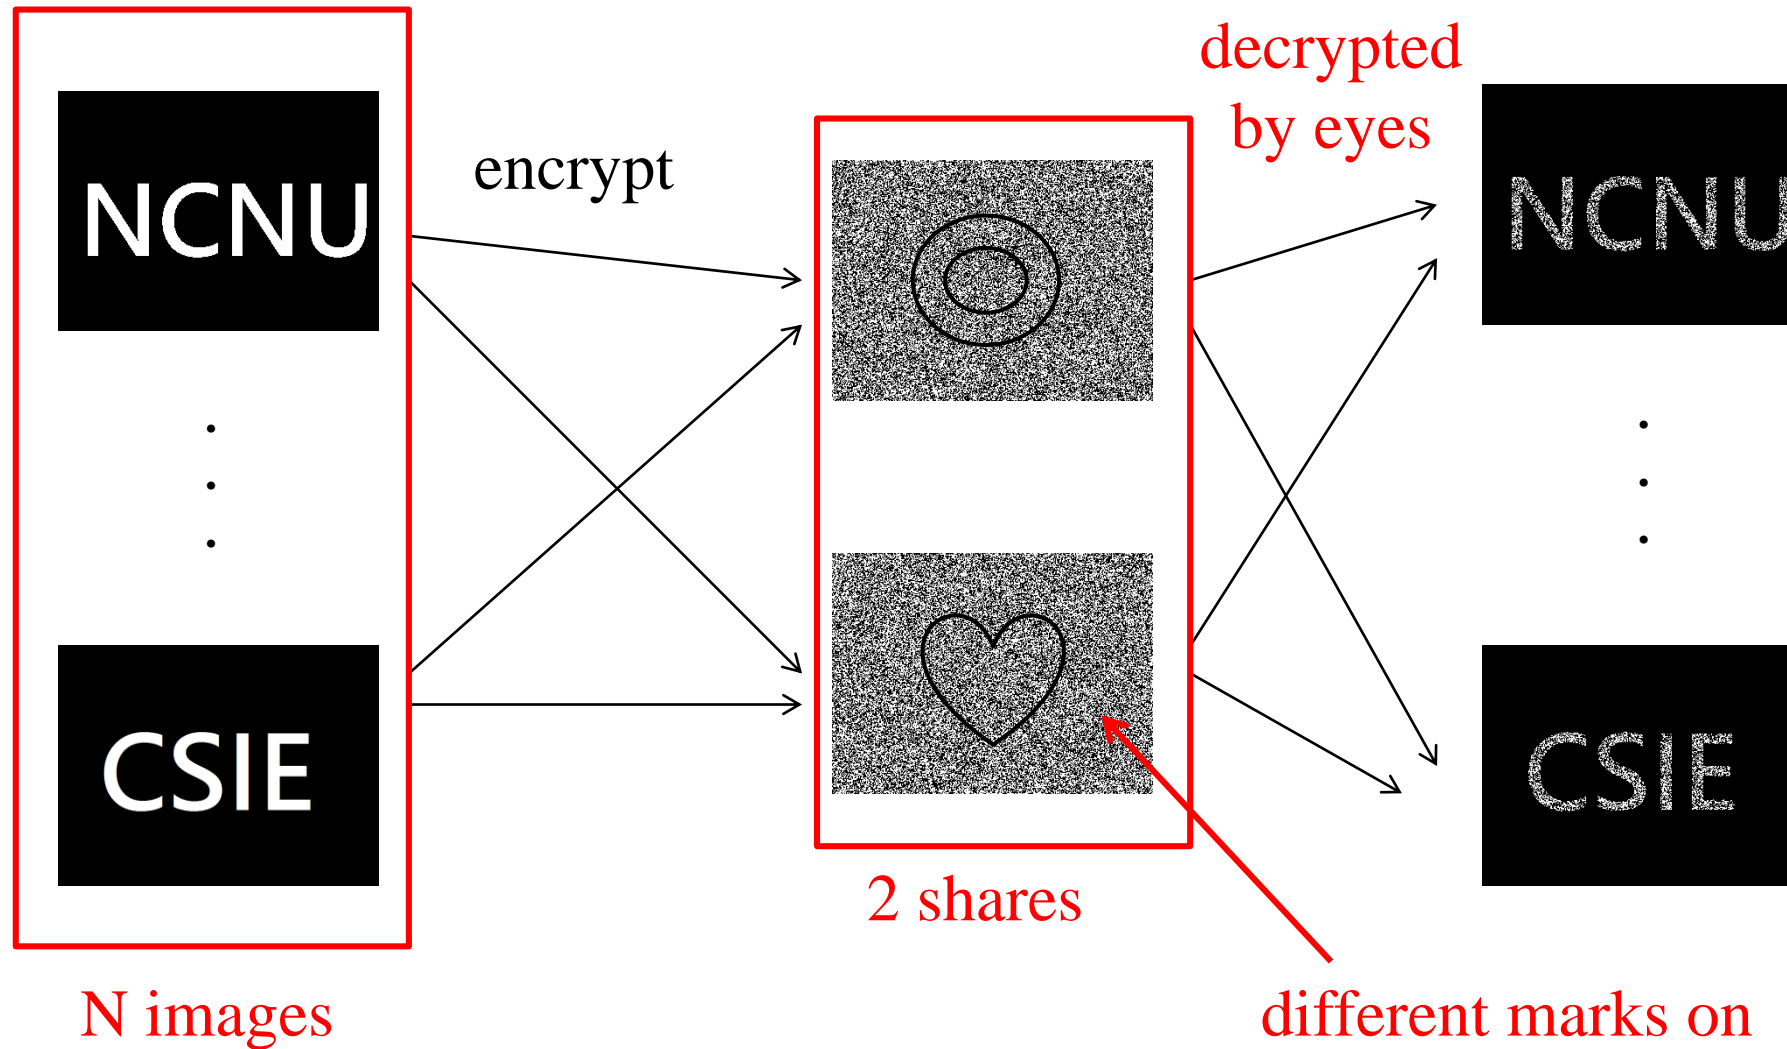

# Suspicious ?

# Meaningful VMSSS (MVMSSS)

# Our main achievement

# How we decrypt & encrypt ?

- **Shifting** random grids
- For example  $N = 3, p = 4$

First image

	1	2	3	4
share <sub>1</sub>	1	2	3	4
share <sub>2</sub>	1	2	3	4
share <sub>1</sub>	1	2	3	4
share <sub>2</sub>	1	2	3	4

Second

	1	2	3	4	
$\frac{1}{p}$	1	2	3	4	
	1	2	3	4	
	1	2	3	4	
	1	2	3	4	1

Third

	1	2	3	4		
$\frac{2}{p}$	1	2	3	4		
	1	2	3	4		
	1	2	3	4		
	1	2	3	4	1	2

# How we make them meaningful?

- $\text{Share}_1(a, b) = C1(a, b)$       this two pixels are according to the first pixels you randomly select
- $\text{Share}_2(c, d) = C2(c, d)$

# Comparison

	Number of secret images	Meaningful shares	Quality of shares	Any secret rectangle images
<b>The proposed scheme</b>	More than 2	Yes	High	Yes
<b>Chen et al. (2012)</b>	4	No	Low	No (Square only)
<b>Liu et al. (2015)</b>	3	Yes	Low	No (Square only)
<b>Chang et al. (2010)</b>	More than 2	No	High	Yes

# Conclusion

- With the Meaningful Shares
  - efficiency on image management
  - more secure when transmission
  
- With the Shifting Random Grid
  - flexibility on the number of the secret images
  - any rectangle secret image allowed
